DETAILED ACTION

Oath/Declaration

The oath or declaration is defective because it is not signed by the inventor.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970);and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-30 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1 and 30 of U.S. Patent No. 6,614,018. Although the conflicting claims are not identical, they are not patentably distinct from each other because claims 1-30 of the instant application are anticipated by claims 1 and 30 of 6,614,018. Both sets of claims include a process for isotope separation comprising the steps of imparting a velocity and direction to a stream of material along a substantially linear path within an apparatus in a low-gravity environment, heating and ionizing the material as it flows along the path to produce an ionized stream comprising ionized material, confining the ionized material along the path to maintain a cross sectional area of the ionized stream, deflecting at least some of the ionized material from the ionized stream to an individual ionized stream having a deflection orientation

and angle away from the path, so as to separate the ionized material from any nonionized material within the ionized stream, and collecting at least some of the ionized material from the individual ionized stream.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
